

Converge® with EMV® 3D Secure

eCommerce payments made simple and secure

Adding EMV 3D Secure to Converge helps to reduce eCommerce fraud. EMV 3D Secure prevents unauthorized eCommerce transactions at the point of the online sale while shifting eCommerce fraud liability back to the card-issuing bank.

EMV 3D Secure was developed to provide the same peace of mind during an online transaction as the EMV Chip Card used for in-person payments. It creates a standardized and secure authentication solution for both your business and the cardholders.

Consumers value the convenience and ease of shopping online, which is why transitioning to eCommerce seamlessly is key to sustaining revenue. Having Converge with EMV 3D Secure adds an additional validation layer that helps promote a frictionless cardholder experience during the online checkout process.

Fight eCommerce fraud with EMV 3D Secure

- Improved approval and authentication rates
- Reduction in card-not-present fraud
- Smoother user experience, which could result in fewer cart abandonments
